

Fillable form validation

Service request sample / Checked 30 September 2026

Checks completed

01 One page, 12 fields

Nine text fields, including two multiline areas, and three checkboxes. All field names are unique and match their visible controls.

02 Values survive saving

The completed example was saved and reopened with pypdf. A separate MuPDF test edited all 12 fields, saved a copy, closed it and reopened it; both tools agreed on every saved value.

03 Field data and display agree

Canonical form values match page widgets. Checkbox states and display appearances are present. The sample remains interactive.

04 Layout reviewed in two renderers

Blank and completed pages were rendered and visually checked with Poppler 26.05.0 and MuPDF 1.26.6. Sample entries fit without clipping or overlaps.

05 No submission behavior

No submit button, form submission action or JavaScript was added. The content is fictional, and the example uses an example.com email address.

Viewer scope

Rendering engines: Poppler and MuPDF. Form data: pypdf 6.10.0 and MuPDF. Interactive Adobe Acrobat Reader, Apple Preview, browser PDF viewers and mobile PDF apps were not tested.

Quick check in your chosen viewer

Open a copy of the blank form. Enter short fictional details, toggle all three checkboxes, save the copy, close it and reopen it. Check every entry and the print preview before using the form.

Long entries, non-ASCII input, keyboard navigation and accessibility have not been certified. This is a portfolio sample, with no compatibility or business-outcome guarantee.
